Install SnapCenter Plug-in for SAP HANA Database independently on the Linux host

You can install the SnapCenter Plug-in for SAP HANA Database directly on the Linux host if your environment does not allow remote installation of the plug-in from the SnapCenter Server. You can use an interactive wizard or the command-line interface to install the plug-in.

The Plug-in for SAP HANA Database must be installed on each of the Linux host where the HDBSQL client resides.

Prepare to install the SnapCenter Plug-in for SAP HANA Database on the Linux host

The Linux host on which you are installing the SnapCenter Plug-in for SAP HANA Database must meet the dependent software, database, and operating system requirements.

The Interoperability Matrix Tool (IMT) contains the latest information about the supported configurations.

[NetApp Interoperability Matrix Tool](#)

The SnapCenter Plug-in for SAP HANA Database is part of SnapCenter Plug-ins Package for Linux. Before you install SnapCenter Plug-ins Package for Linux, you must have already installed SnapCenter 4.0 on a Windows host.

Install the SnapCenter Plug-in for SAP HANA Database on Linux hosts by using the command-line interface

You should install the SnapCenter Plug-in for SAP HANA Database by using the SnapCenter user interface (UI). If your environment does not allow remote installation of the plug-in from the SnapCenter UI, you can install the Plug-in for SAP HANA Database either in console mode or in silent mode by using the command-line interface (CLI).

Steps

1. Copy the SnapCenter Plug-ins Package for Linux installation file (snapcenter_linux_host_plugin.bin) from C:\ProgramData\NetApp\SnapCenter\Package Repository to the host where you want to install the Plug-in for SAP HANA Database.

You can access this path from the host where the SnapCenter Server is installed.

2. From the command prompt, navigate to the directory where you copied the installation file.
3. Install the plug-in: `path_to_installation_bin_file/snapcenter_linux_host_plugin.bin -i silent -DPORT=port_number_for_host -DSERVER_IP=server_name_or_ip_address -DSERVER_HTTPS_PORT=port_number_for_server`
 - -DPORT specifies the SMCORE HTTPS communication port.

- -DSERVER_IP specifies the SnapCenter Server IP address.
- -DSERVER_HTTPS_PORT specifies the SnapCenter Server HTTPS port.
- -DUSER_INSTALL_DIR specifies the directory where you want to install the SnapCenter Plug-ins Package for Linux.
- DINSTALL_LOG_NAME specifies the name of the log file.

```
tmp/sc-plugin-installer/snapcenter_linux_host_plugin.bin -i silent
-DPORT=8145 -DSERVER_IP=scserver.domain.com -DSERVER_HTTPS_PORT=8146
-DUSER_INSTALL_DIR=/opt
-DINSTALL_LOG_NAME=SnapCenter_Linux_Host_Plugin_Install_2.log
-DCHOSEN_FEATURE_LIST=CUSTOM
```

4. Edit the `<installation_directory>/NetApp/snapcenter/scc/etc/SC_SMS_Services.properties` file, and then add the `PLUGINS_ENABLED = hana:3.0` parameter.
5. Add the host to the SnapCenter Server using the `Add-Smhost` cmdlet and the required parameters.

You can add a host only from the command-line interface.

The information regarding the parameters that can be used with the command and their descriptions can be obtained by running *Get-Help command_name*. Alternatively, you can also refer to the [SnapCenter Software Cmdlet Reference Guide](#).
